

## Cloud Services Threat Detection and Response

- **SOC Monitoring of your AWS Cloud environment.** Including traditional services like EC2, S3 and IAM with serverless offerings like Lambda.
- **Implemented via Cloudwatch and Cloudtrail logging.** Even custom-developed solutions that provide logs to Cloudwatch can be monitored.
- **Intuitive, searchable, filterable platform** for viewing alerts
- **Simple cost structure** based on event quantity
- **Human-in-the-loop** security analytics

### 24/7 Threat Detection and Response

for your AWS cloud apps, workloads and infrastructure.

---

In today's fast-paced digital landscape, securing your cloud environment has never been more critical. As businesses transition to cloud-native or hybrid architectures, they often find themselves vulnerable to an expanding range of cyber threats that traditional security measures struggle to address.

This is especially challenging for mid-market companies who can't afford the overhead of a full-scale, in-house Security Operations Center.

Our 24/7 Managed XDR service extends beyond on-premises needs to AWS cloud applications, workloads, and infrastructure.

Let Gradient Cyber vigilantly monitor your AWS Cloud environment - protecting you from business-impacting cyber threats.
